

Service Planning

Ensuring optimal performance

Avoid unnecessary stops

We know that success in the transport business means running your trucks with as few interruptions as possible. This requires keeping the number of unplanned service stops to a minimum.

With our free-of-charge Service Planning, you can do just that. We create a Service Schedule tailored to your trucks and the way they are used. With your input and our experience, your trucks will get the preventative maintenance they need, when they need it – no more, no less.

We want to see less of you

By letting us help plan the service of your truck, you don't have to visit us as often. This means that you get more time to do what you do best.

We plan together

Your truck model and the unique assignments that it will be performing is the base of your tailored Service Schedule. By giving us an estimate of the distances that will be covered, we can accurately estimate the service needs. When we create the Service Schedule, the information given by you together with our expertise will assure that your truck is maintained in the best fashion.

Our system will calculate a complete Service Schedule, showing what action needs to be taken during the entire duration of the service period. The Service Schedule will also state at exactly what mileages each action should be taken.

More uptime

The Service Schedule optimises your visits to us by grouping the different actions into fewer visits. For example, the schedule will take into account that your truck may be out of operation during holidays or if there is a request for service at specific times. Should you change your driving conditions or the specification of your truck, you will receive a new Service Schedule. This can be done at any time – all changes and actions will be documented, contributing to the second-hand value of your truck.

By setting up a Service Schedule for your truck, you have taken the first step towards more carefree miles.

The next step is taking out a UD Trucks Service Agreement.

Service planning – step by step

1

The right input

All relevant information about your truck is entered into the system. This includes exact specifications, how the truck will be used and the expected distances involved.

2

Identifying the best solution

From here we will identify the optimal level of maintenance for your truck.

3

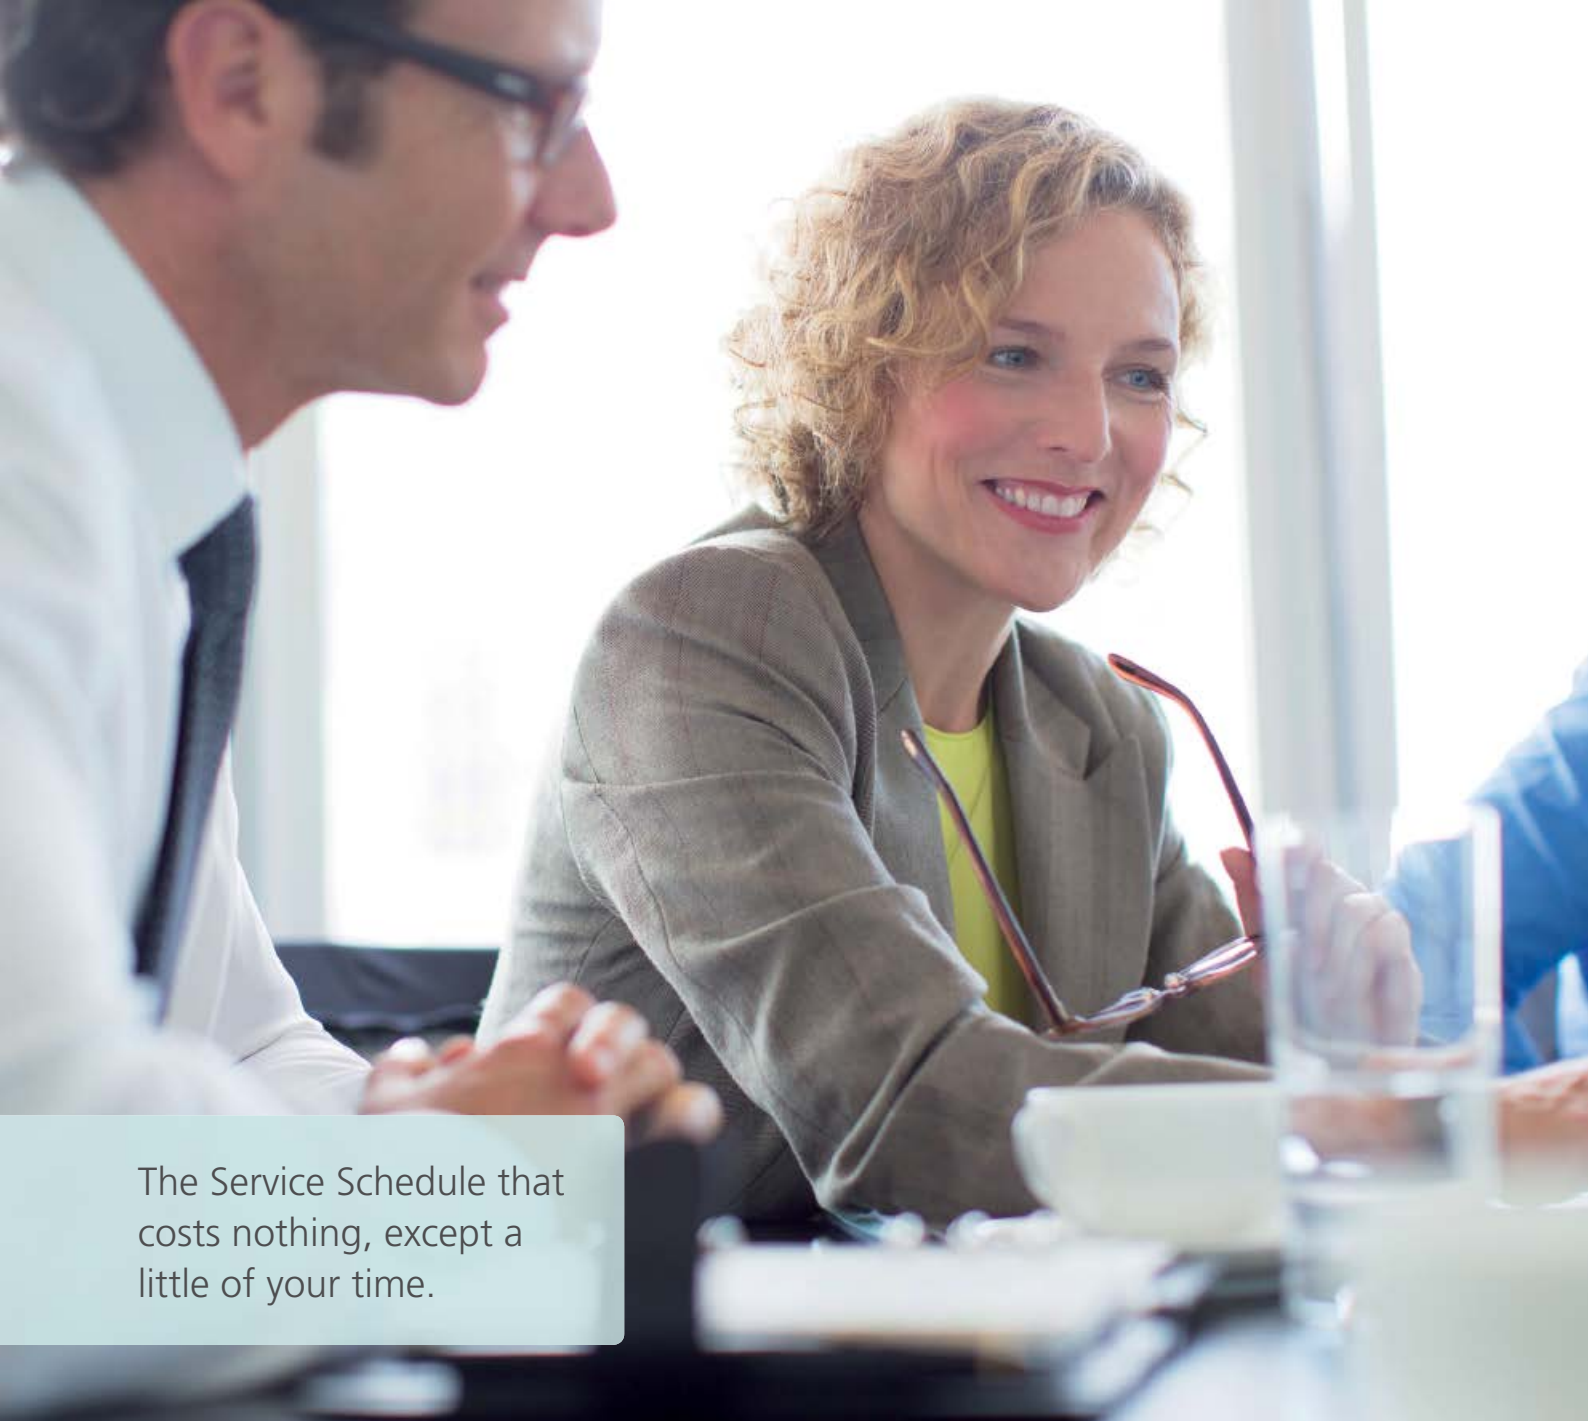

Precise planning

UD Trucks Service Planning shows exactly when your truck needs a service and the actions that should be performed.

4

Fine-tuning your service

When your truck is with us, we can fine-tune the Service Schedule if new data shows that this is necessary. This ensures optimised performance and operational economy.

The Service Schedule that costs nothing, except a little of your time.

UD Trucks Service Planning

Ensure maximum performance and reliability of your truck, while protecting your investment and minimising operating costs. With the right planning, your truck will get exactly the preventative maintenance it requires – no more, no less.
